

CEILING DEPOSITORY SYSTEM

ABSTRACT

The ceiling storage system includes an overhead transport vehicle and a storage rack. The overhead transport vehicle has a traveling section traveling on rails arranged in a grid pattern, and a body section suspended from the traveling section and configured to hold an article on an underside of the rails. The storage rack has a plurality of suspension members extending in an up-down direction, and having a middle portion provided with a rail support and a bottom end provided with a unit support, and a shelf unit and a scaffolding unit supported by the unit support of the suspension members. The corner portion of the shelf unit and the corner portion of the scaffolding unit are supported by the unit support.
