(54) Title: INTEGRAL MINIATURISED NEBULISER FOR ELASTICALLY DEFORMABLE BOTTLE

(57) Abstract: An integral miniaturised nebuliser for elastically deformable bottle (1), provided with a rotatable closing cap (5), with discharge orifice, and with a suction tube (16) immersed in the liquid to be nebulised, comprises a head (3) in a single piece with a body (4) connectable to an elastically deformable bottle (1). The head (3) internally has an elbow conduit (13) for the liquid to be sprayed, extending in a longitudinal segment (14) able to engage the suction tube (16), and in a transverse segment (15) able to end in the discharge orifice of the rotatable closing cap (5) when said cap (5) is in the nebulisation position. The transverse segment (15) is coaxial inside a conduit (18) of the air inside the bottle (1) and in communication therewith by means of a plurality of radial channels (25) drilled in the terminal end of the same transverse segment (15).
