

ABSTRACT

Disclosed are an information interaction method and apparatus, a server, a system and a storage medium. The method comprises: first, receiving a group creation request message including identifiers of group members, and creating, according to the group creation request
5 message, a discussion group including the group members, wherein the group creation request message is sent by means of a mail server; and then, sending a group creation notification message to IM clients of the group members, so that the IM clients present the discussion group according to the group creation notification message. Information intercommunication and fusion in different servers can be realized by means of the cooperative working of an IM
10 server and a mail server, thereby improving the information processing efficiency and satisfying office requirements of a user.
