- 301 Receive network information that is respectively sent by one or more second UEs and is associated with a network state of each second UE
302 Send one or more pieces of the network information to the base station
303 Receive instruction information that is sent by the base station and instructs at least one second UE among the one or more second UEs to work in a first working state
AA Base station
BB First UE
CC Second UE

(57) Abstract: The embodiments of the present disclosure relate to an information transmission method and apparatus, and a communication device. The method comprises: receiving network information that is respectively sent by one or more second user equipments (UEs) and is associated with a network state of each second UE; sending one or more pieces of the network information to a base station; and receiving instruction information that is sent by the base station and instructs at least one second UE among the one or more second UEs to work in a first working state.
