

ABSTRACT

INSTANCE DEPLOYMENT METHOD, INSTANCE MANAGEMENT NODE, COMPUTING NODE, AND COMPUTING DEVICE

An instance deployment method, an instance management node, a computing node, a
5 computing device, a computer-readable storage medium, and a computer program product are
provided. In the method, the instance management node receives a request for creating a service
instance (S41); the instance management node obtains a cache configuration corresponding to the
service instance (S42); and the instance management node creates the service instance on a
computing node, and creates a cache instance on the computing node based on the cache
10 configuration (S43). In this way, the service instance may provide a service by using the matched
cache instance. This improves efficiency of providing a service by the service instance, and
improves service performance.
