

METHOD OF PACKAGING ENCAPSULATING RESIN COMPOSITION, PACKAGE AND
METHOD OF TRANSPORTING PACKAGE

ABSTRACT

5 The present invention provides a technique for suppressing the
consolidation a portion of a granular encapsulating resin composition
which may occur after accommodating the granular encapsulating resin
composition in a packaging material. Provided is a method of
packaging a granular encapsulating resin composition, in which, when
10 the bulk density of the granular encapsulating resin composition is
M (g/cc) and the height of the deposited material of the granular
encapsulating resin composition is L (cm) in a state of being
accommodated in the packaging material, the method satisfies the
relationship $M \times L \leq 19$.
