TARGET, METHOD, AND SYSTEM FOR CAMERA CALIBRATION

ABSTRACT

The present disclosure relates to a target, a method, and a system for calibrating: a camera. One example embodiment includes a target. The target includes a first pattern of fiducial markers. The target also includes a second pattern of -fiducial markers. The first pattern of fiducial markers is a scaled version of the second pattern of fiducial markers, such that a calibration image captured of the target simulates multiple images of a single pattern captured at multiple calibration perspectives.
