

NEAR FIELD COMMUNICATION-BASED PAYMENT METHODS, APPARATUSES, AND SYSTEMS, AND DEVICES

ABSTRACT

5 This application provides near field communication-based payment methods, apparatuses,
and systems, and devices. The solution includes: A user terminal obtains a payment page link from
a near field communication terminal in a near field communication manner, and initiates a payment
authorization request to a payment server based on the payment page link. The payment server
sends a payment voucher to the near field communication terminal in response to the payment
10 authorization request. The near field communication terminal sends the payment voucher to a
checkout terminal in a wired communication manner, to implement near field communication-
based payment.
