

METHOD AND ELECTRONIC DEVICE FOR PROVIDING PRODUCT SEARCH INFORMATION

ABSTRACT

The embodiments of the present application disclose a method and electronic device for providing product search information. The method includes: providing a first page for displaying product information, as well as operation options for initiating product search requests based on the products displayed on the first page; in response to a search request initiated through the operation options corresponding to the target product on the first page, a second page is provided. The second page is used to display product search results, which include refined product search results obtained after conducting searches based on the target product. Through this application embodiment, the efficiency of product selection or decision-making can be enhanced.
