

MODEL MONITORING METHOD, APPARATUS, AND SYSTEM, STORAGE MEDIUM,
AND PROGRAM PRODUCT

ABSTRACT

5 This application discloses a model monitoring method, apparatus, and system, a storage
medium, and a program product. The method includes: A terminal device obtains first information,
where the first information includes one or more first indices of one or more pieces of ground truth
information; and obtains the one or more pieces of ground truth information corresponding to the
one or more first indices, where the one or more pieces of ground truth information are used for
obtaining a monitoring result of performance of an AI model, and an output of the AI model is
10 predicted information. In this solution, the terminal device may obtain, by obtaining the one or
more first indices of the one or more pieces of ground truth information, ground truth information
corresponding to a specific time unit, so that performance of a prediction model can be flexibly
monitored.
