

TITLE:
PIXEL STRUCTURE

ABSTRACT

5

A pixel structure includes a common electrode and sub-pixel structures. The common electrode includes a first common electrode portion and a second common electrode portion that cross each other. Each of the sub-pixel structures includes a pad group and a light-emitting element. The pad group at least includes a first pad. The light-emitting
10 element is bonded to the pad group. The sub-pixel structures include a first sub-pixel structure, a second sub-pixel structure and a third sub-pixel structure. In a top view of the pixel structure, the pad group of the first sub-pixel structure and the pad group of the second sub-pixel structure are separated by the first common electrode portion, and the pad group of the second sub-pixel structure and the pad group of the third sub-pixel structure are
15 separated by the second common electrode portion. In addition, another pixel structure is also provided.
