

PORTABLE ELECTRONIC DEVICE
ABSTRACT

162162

A portable electric device adapted to be removably connected to an external device comprises a housing having an access opening. A display is positioned within the housing for displaying display information thereon. An electrical circuit is accommodated in the housing and has a terminal accessible via the access opening in the housing. The electrical circuit determines a display orientation of the display of information on the display based upon a state in which the portable electrical device is connected to the external device.
