

ABSTRACT**A MOUNTING APPARATUS**

The present invention provides a mounting apparatus, comprising a body configured to hold at least one article and be attached to a receiving surface. The body comprises a sloped portion that allows the held article to be sloped at one or more angles relative to the receiving surface when the mounting apparatus is attached onto the receiving surface. A corresponding kit of parts assembly is further described. The article is a display unit of an on-board unit, and the receiving surface of the designated location is an interior surface of a windscreen of a vehicle.
