Fig. 1 Serum HI titers recorded 14 days post-vaccination

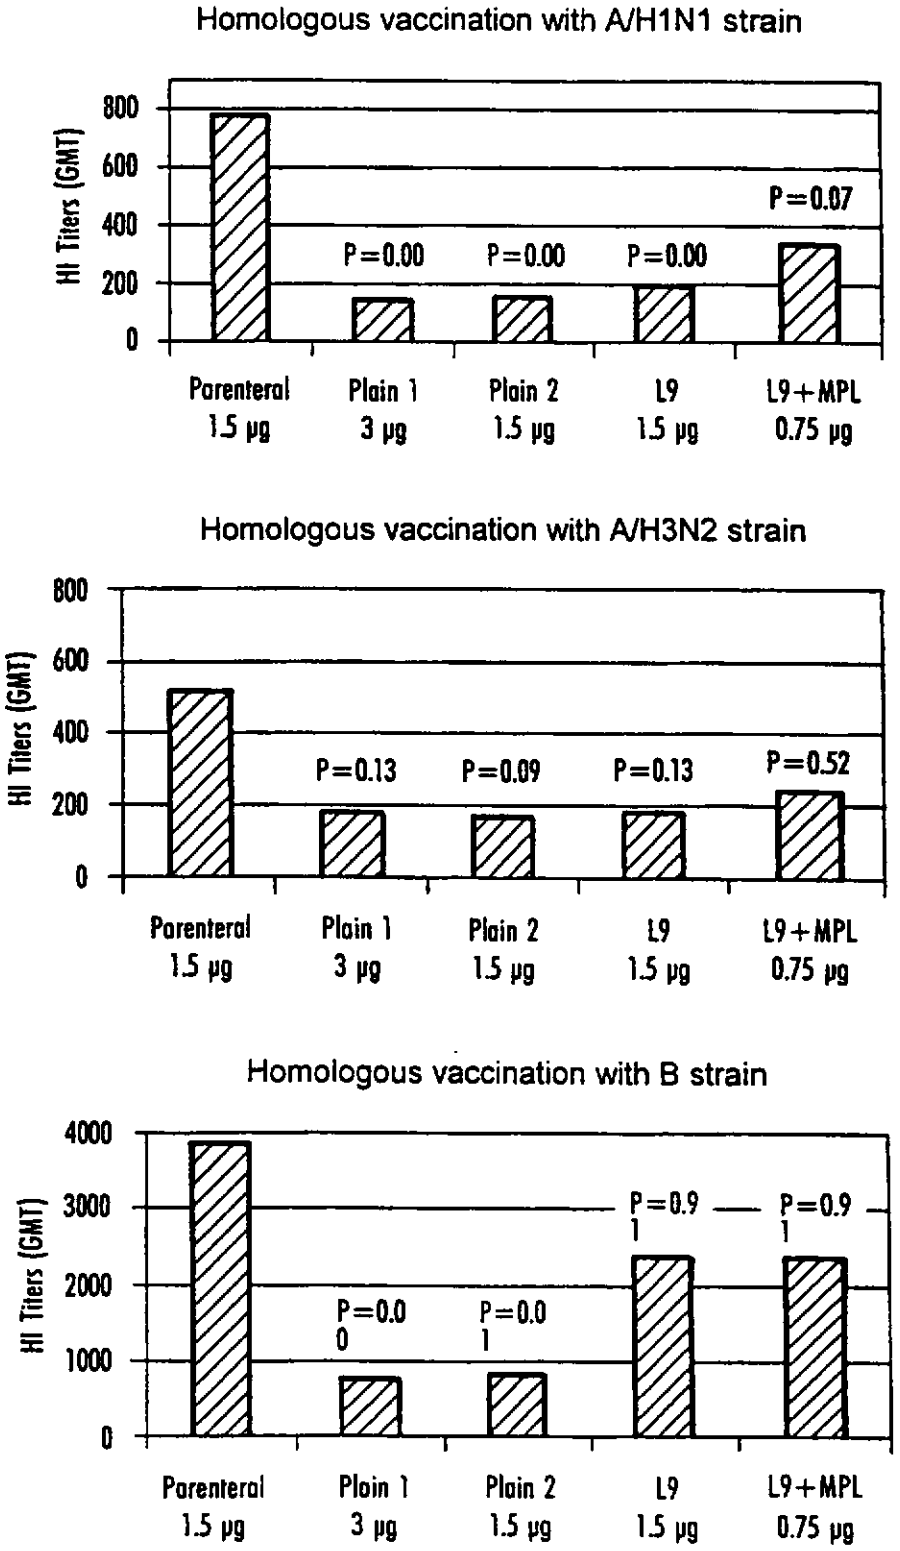

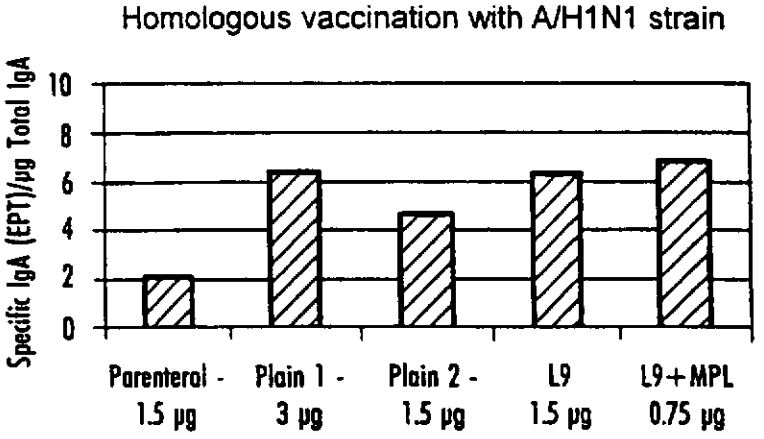

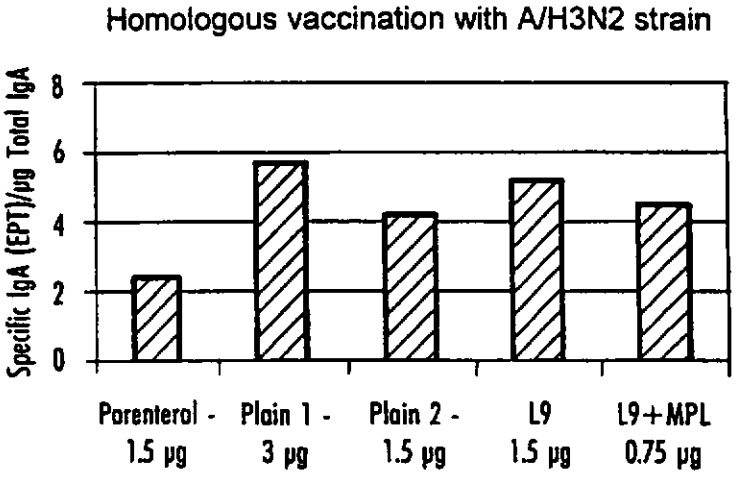

Fig. 2

Nasal Specific IgA responses recorded 14 days post-vaccination

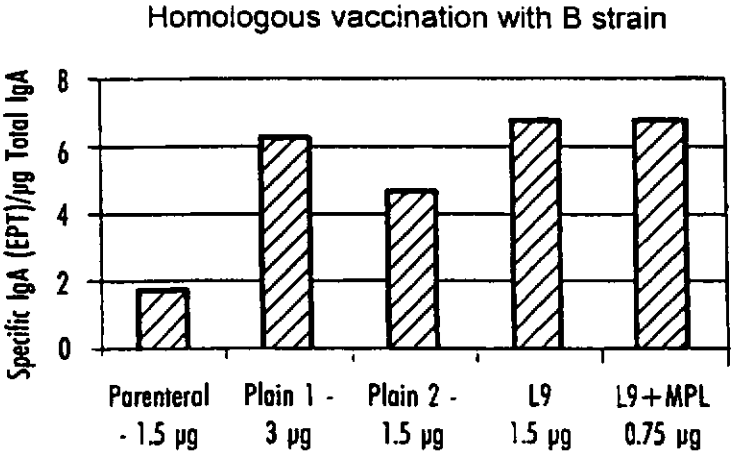

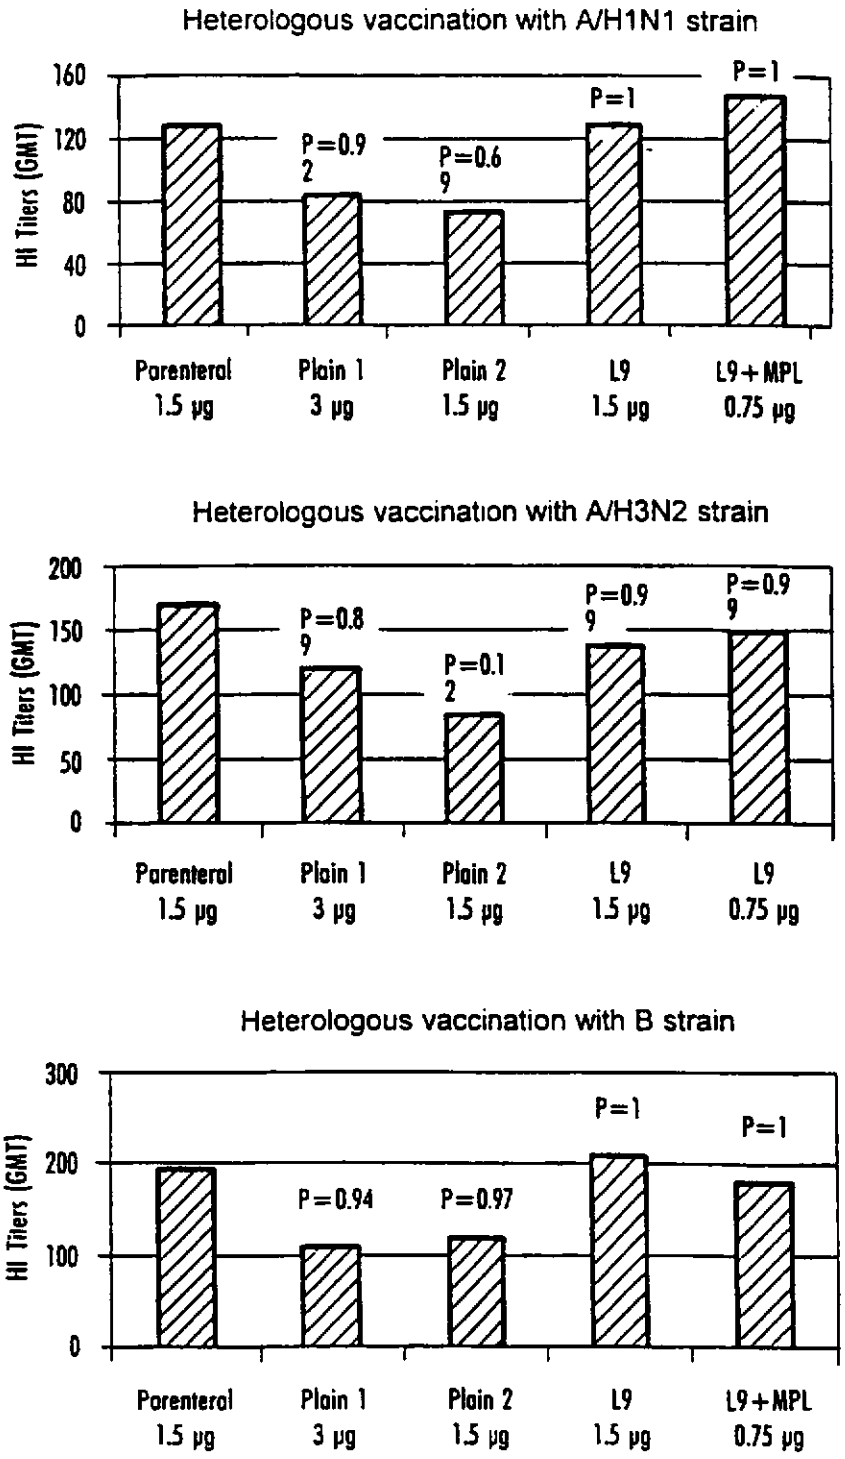

Fig. 3

Serum HI titers recorded 14 days post-heterologous vaccination

Hypothesis = not significantly different from the parenteral group. p values > 0.05 mean the titer of the tested group is not statistically different from that of the parenteral group.

Fig. 4

Nasal Specifiic anti-booster IgA responses recorded 14 days post-heterologous vaccination.
