

Abstract:

INDANE DERIVATIVES, PROCESSES FOR PREPARING THE SAME AND
SYNTHETIC INTERMEDIATE OF THE SAME

Disclosed are an indane compound represented by the
formula:

wherein R^1 is aryl, lower alkyl, cycloalkyl, halogeno-
lower alkyl, lower alkenyl, phenyl-substituted lower
10 alkenyl, monocyclic or bicyclic aromatic heterocyclic
having N, O or S as a hetero atom, lower alkoxy,
phenoxy, lower alkylamino, lower alkenylamino, phenyl-
amino, lower alkyl substituted by monocyclic or
bicyclic aromatic heterocyclic having N, O or S as a
15 hetero atom, or lower alkenyloxy; R^2 is H or lower
alkyl; X is carbonyl or thiocarbonyl; Alk is single
bonding arm or lower alkylene; and the dotted line is
presence or absence of a double bond,
or a pharmaceutically acceptable salt thereof, processes
20 for preparing the same and a synthetic intermediate
thereof.
