

METHOD, PROGRAM, AND SYSTEM FOR PROVIDING FINANCIAL
TRANSACTION BASED ON A VIRTUAL CORPORATE CARD

【ABSTRACT】

5 Disclosed is a method for providing a virtual corporate card-based financial
transaction including receiving, by a server, an employee-specific virtual corporate
card number or searching for an employee-specific virtual corporate card number
thus stored previously, the employee-specific virtual corporate card number being
generated by a virtual corporate card number generation function included in a
10 manager application registered in the server, searching, by the server, for a storage
location of company identification (CID) based on the employee-specific virtual
corporate card number, extracting, by the server, a corporate card usage condition
stored after matching the found storage location of the CID or a corporate card usage
condition included in the employee-specific virtual corporate card number, verifying,
15 by the server, the employee-specific virtual corporate card number, and making, by
the server, a payment with an actual corporate card number or a representative-
specific virtual corporate card number, which is stored after matching the storage
location of the CID under the corporate card usage condition.
