(54) **Title:** SOCIAL SHARING OF SECURITY INFORMATION IN A GROUP

Fig. 1a

(57) **Abstract:** Techniques for social sharing security information between client entities forming a group are described herein. The group of client entities is formed as a result of a security server providing one or more secure mechanisms for forming a group among client entities, the client entities each belonging to a different organization. The security service then automatically shares security information of a client entity in the group with one or more other client entities in the group.
