
Sending an express package
100
There is an express package to be sent in a system
102
A TaoBao app acquires "recipient" positioning (more than one)
108
Determine whether a recipient address is coincident with the "recipient" positioning
106
The courier conducts positioning (recipient address)
104
The system plans a path
110
The "recipient" receives a notification for home delivery of an express package
114
A courier delivers the express package according to the planned path
112
Confirm that someone is at home for receiving the express package
116
