

PROBE CARD CASE AND PROBE CARD TRANSFER METHOD

ABSTRACT

Provided is a probe card case or the like, which makes it possible to easily handle a probe card, and which is applicable also to probe cards having reduced diameters (small sizes). This probe card case for storing a probe card is characterized in being provided with: a first case member, which is capable of having the probe card placed at a predetermined position; a second case member, which can be fitted in on the upper side of the first case member, and which has a card fixing mechanism for fixing the probe card; and a case fixing mechanism for fixing the first case member and the second case member. The probe card case is also characterized in being capable of transferring the probe card in a state wherein the probe card is stored in the probe card case, and the first case member and the second case member are fixed to each other, and also in being capable of transferring the probe card merely with the second case member in a state wherein the probe card is fixed to the second case member.
