(54) Title: BOTTLE PACKAGING FOR FLOWABLE PRODUCT

FIG. 14

(57) Abstract: A bottle packaging (10) includes a groove (40) on the neck (22) of a bottle with the groove spaced longitudinally from a shoulder of the bottle (11) a distance greater than or equal to a width of the groove, and upper (22a) and lower (22b) portions of the neck may have outer transverse cross - sectional dimensions that are substantially equal to one another. An upper circumferential sidewall of the groove may be chamfered, while a lower circumferential sidewall may be concave. The bottle may be combined with an adapter (48) such that when the adapter is releasably connected to the bottle, a lowermost rim of the adapter is spaced longitudinally from an upper reach of the groove. The adapter may include a detent (131) on an inner surface thereof adapted to removably seat in the groove to releasably connect the adapter to the bottle. A closure (30) member may include at least one of a detent (331) and a sealing member removably seated in the groove.
