

[Fig. 1]

Example 1

Pulverized powder of Fe-Pt chips was used

Before flattening: 200 to 300 µm

Average grain size after flattening: 85 µm

[Fig. 2]

Example 1

Pulverized powder of Fe-Pt chips was used

Before flattening: 200 to 300 μm

Average grain size after flattening: 85 μm

[Fig. 3]

Example 2

Pulverized powder of Fe-Pt chips was used

Before flattening: 100 to 150 μm

Average grain size after flattening: 80 μm

[Fig. 4]

Example 2

Pulverized powder of Fe-Pt chips was used

Before flattening: 100 to 150 μm

Average grain size after flattening: 80 μm

[Fig. 5]

Comparative Example 1

Porous Fe-Pt powder was used

Average grain size after flattening: 11 μm

[Fig. 6]

Comparative Example 1

Porous Fe-Pt powder was used

Average grain size after flattening: 11 μm

[Fig. 7]

[Fig. 8]
