

RECORDING CONTENTS OF DISPLAY SCREENS

Abstract of the Disclosure

Screen recording may be implemented with better
5 security, performance, power savings and cost without the
need of additional software to support the screen recording
feature, in some embodiments, by using a keyboard, video,
mouse functionality already provided in a computer system
chipset on a motherboard. Frames of video may be stored on
10 that system or, in some cases, may be selectively provided
to a local area network.
