(54) Title: INTRAUTERINE PRESSURE CATHETER INTERFACE CABLE SYSTEM

(57) Abstract: An interface cable system for providing electrical interconnection between an intrauterine pressure catheter system and a monitoring system is provided. The interface cable system includes a first connector configured to provide electrical interconnection between the interface cable system and the intrauterine pressure catheter system and a second connector configured to provide electrical interconnection between the interface cable system and the monitoring system. The interface cable system also includes a plurality of conductors extending between said first connector and said second connector and a switching element for configuring the interface cable system to provide, upon operation of the switching element, a time period in which a zeroing operation of the intrauterine pressure catheter system may be performed. The interface cable system also includes an indicator for indicating that the switching element has been operated, thereby indicating that the zeroing operation may be performed during the time period.
