WHAT IS CLAIMED IS:

1. A hair cosmetic material applicator comprising:

a comb section with multiple comb teeth projected in a projected direction; and

a slice-taking stick projecting from a leading end of the comb section and having a top end positioned somewhat apart from the multiple comb teeth of the comb section,

wherein the projected direction is a direction perpendicular to arrangement directions of the multiple comb teeth, and

wherein the slice-taking stick projects in a direction inclined with respect to the projected direction with an angle between the projected direction and the arrangement directions.

2. The hair cosmetic material applicator according to claim 1,

wherein the comb section comprises:

a base having one side surface; and

the multiple comb teeth arranged on the one side surface of the base and projected from the base, and

wherein the slice-taking stick projects from a leading end side of the base in arrangement directions to a side to which the multiple comb teeth are projected, the top end of the slice-taking stick being arranged spaced apart from the comb section by a distance larger than a distance between the multiple comb teeth adjacent to one another.

3. The hair cosmetic material applicator according to claim 1,

wherein the slice-taking stick projects spaced apart from the multiple comb teeth of the comb section.

4. The hair cosmetic material applicator according to claim 1,

wherein a height of the slice-taking stick in the projected direction is equal to or smaller than a height of the multiple comb teeth in the projected direction.

5. The hair cosmetic material applicator according to claim 1,

wherein an imaginary line connecting top ends of the multiple comb teeth in the comb section forms a curved line having a concave arc-like shape, a bottom of the curved line having the concave arc-like shape being positioned deviated from a center of the comb section to a leading end side thereof.

6. The hair cosmetic material applicator according to claim 1, further comprising:

a handle section provided extending from a rear end portion of the comb section; and/or

a brush section provided on a rear side with respect to the projected direction in the comb section.

7. The hair cosmetic material applicator according to any one of claims 1 to 6,

wherein a distance between the top end of the slice-taking stick and one of the multiple comb teeth adjacent to the slice-taking stick is 0.5 cm or more and 2 cm or less.

8. The hair cosmetic material applicator according to any one of claims 1 to 6,

wherein the height of the slice-taking stick in the projected direction is smaller than the height of the multiple comb teeth in the projected direction by 0.5 mm or more and 10 mm or less.
