Abstract

A method for management of mobility of a terminal is performed by a terminal and includes: receiving information configured for conditional mobility that is sent by a network device, in which the information configured for conditional mobility includes one of: a configuration of a conditional handover and a configuration of a conditional primary secondary cell (PSCell) change, or a configuration of the conditional handover and a configuration of a conditional PSCell addition; and executing the conditional mobility according to a satisfaction of an execution condition of the conditional mobility.
