【CLAIMS】

【Claim 1】

A card game table on which a dealer location zone is formed at one side thereof and a plurality of game player location zones facing the dealer location zone are formed, the card game table comprising:

a game pad that is provided on an upper surface of the card game table at which a dealer and players are located, the game pad is configured for a betting zone and a card placement zone necessary for progress of a card game comprising a plurality of rounds from a first round to an N^{th} round, N being an integer greater than 1,

wherein the betting zone is a region in which a player places a game chip for betting when the card game progresses and is provided with a pair of sides comprising a first betting side and a second betting side, each betting side being configured as a layout having a plurality of regions with a shape and size to which a first round to an N^{th} round are sequentially designated, and betting side being additionally configured with a layout having an option region at an uppermost end, and the betting zone being located in each of the plurality of game player location zones, and

wherein the card placement zone is a region in which the dealer places cards for progress of the card game when the card game progresses and is provided with a pair of sides comprising a first card placement side being configured as a layout having a plurality of regions with a same shape and size to which a first round to an N^{th} round are sequentially designated.

【Claim 2】

The game table of claim 1, wherein the plurality of the regions of the betting zone are sequentially designated according to number of rounds, wherein award rates for each round increase as the number of round increases, and wherein an award rate of the option region is the highest.
