(54) Title: GAME CONTROLLERS

FIG. 1

(57) Abstract: According to various embodiments, there is provided a game controller including: a trigger button rotatable between a first position and a second position by rotating about a rotation axis, the trigger button being depressible in a direction to activate a switch when the trigger button is in the first position, wherein the direction is at least substantially perpendicular to the rotation axis; and a locking mechanism configured to constrain rotation of the trigger button when the trigger button is in the first position, and further configured to constrain rotation of the trigger button when the trigger button is in the second position.
