

ABSTRACT

A packaging bag 100 includes a cutting guide band 60A extending in a band shape along a transverse direction from a side end portion 81 toward the other side end portion 82. The cutting guide band 60A includes, in order from an upper end portion 84 side, a first guide band having a plurality of first cut lines that are inclined at a predetermined angle with respect to the transverse direction, and that are arranged parallel to each other; a second guide band having a plurality of second cut lines that are perforated, that are inclined at a predetermined angle in a direction opposite a direction of the first cut lines with respect to the transverse direction, and that are arranged parallel to each other at predetermined intervals; and a third guide band having a plurality of third cut lines that are inclined at a predetermined angle in the same direction as the direction of the first cut lines with respect to the transverse direction, and that are arranged parallel to each other. The cutting guide band 60A has a fourth cut line between the first guide band and the second guide band and/or between the second guide band and the third guide band, the fourth cut line being perforated and extending along the transverse direction.
