VERIFICATION METHODS AND APPARATUSES FOR ELECTRONIC DEVICE INSURING

ABSTRACT

This specification discloses verification methods and apparatuses for electronic device insuring. The method includes: collecting an image of an insurance application verifying page of an object device, where a graph verification code is displayed on the insurance application verifying page; invoking a camera of an auxiliary device based on the graph verification code to collect a device image of the object device; identifying a verification token displayed by the object device, and performing validity detection based on the verification token; and after the validity detection is passed, determining the device image as insurance application verification data of the object device.
