

Abstract

The present invention provides a polycyclic compound, a pharmaceutical composition thereof, and a use thereof. The polycyclic compound of the present invention has a structure as shown in formula A, wherein the definitions of R₁-R₆, ring A-ring E, L, n, m, q, and t are as described herein. The compound of the present application is an RIPK1 inhibitor, which can be used for treating an RIPK1-related disease.
