

INFORMATION PROCESSING APPARATUS AND METHOD

ABSTRACT

5 The present disclosure relates to an information processing apparatus and an
information processing method that enable recognition of performance required for
decoding more accurately. A file of an MP4 file format, in which information for
grouping a plurality of partial images which can be independently decoded in a
whole image is stored in moov and the encoded partial images are stored in mdat, is
10 generated, and the generated file is stored. The present disclosure can be applied to,
for example, an information processing apparatus such as an image encoding
apparatus or an image decoding apparatus.
