(54) Title: ROTATING LUER CONNECTOR

**FIG.2**

(57) Abstract: A medical connector includes a body, a first connector defining a longitudinal axis extending from a first end of the first connector to a second end of the first connector and a second connector secured to the body and in fluid communication with the first connector. The first connector is secured to and rotatable relative to the body about the longitudinal axis. The first connector includes a valve member and is configured to be secured to a syringe barrel. The valve member of the first connector having a sealed position and an open position. The valve member of the first connector is configured to move from the sealed position to the open position when a syringe barrel is secured to the first connector.
