

Abstract

A Sensor mast system for positioning a sensor (30), especially a microwave sensor, in predefined positions in
5 a test setup comprises a base (74), a sensor (30) and at least two mast elements (65, 71). A sensor mast is comprised of the base (74), at least one of the mast elements (71) and the sensor (30). All but one mast elements (71) are of fixed height. The mast elements (65,
10 71) are interchangeably connectable to the base (74) and to each other. The sensor (30) is interchangeably connectable to the top of any of the mast elements (65, 71).
