(54) Title: FUEL TANK WITH TRASH AND WATER SEPARATION

(57) Abstract: A fuel tank apparatus is particularly suited for use of vehicles and marine vessels. A fuel tank can be used to supply fuel to an engine, compressor or the like such as when the tank is used to operate an engine or air compressor. The apparatus includes a tank body having a plurality of tank outer walls surrounding an interior that enables fuel to be contained. The tank body has upper and lower end portions. Flow lines are provided for adding fuel to the tank interior and for discharging fuel that is to be consumed by an engine, compressor or other device. The lower end portion of the tank body provides a sump that is specially configured to trap the undesirable contents of fuel such as trash, water, debris, settleable solids and the like. The interior includes a baffle structure that is spaced inwardly of the tank body.
