

ABSTRACT

Provided are a message processing method, apparatus, device and storage medium. The method comprises: acquiring a plurality of messages generated by a data analysis system via at least one message queue, wherein the data analysis system is used for analyzing scene data to generate the plurality of messages; determining a target channel corresponding to each message in at least two connecting channels; and forwarding each message to a management system via the target channel corresponding to each message to enable the management system to process a message transmitted by each target channel based on a message processing strategy corresponding to each target channel.
