

DATA CHECK METHODS, APPARATUSES, AND DEVICES

ABSTRACT

Embodiments of the present specification disclose a data check method, apparatus, and device. The method is applied to a privacy computing unit. The method includes the following: A check-triggering instruction sent by an external server is obtained; encrypted standard basic data of a to-be-identified user is obtained from a trusted institution in response to the check-triggering instruction; and a consistency check is performed on basic data of the to-be-identified user based on the standard basic data.
