(54) Title: CLIENT IDENTIFYING DATA (CID) TARGET-STATE-COMPLIANT COMPUTER-EXECUTABLE APPLICATIONS

FIG. 12

(57) Abstract: An approach for facilitating client identifying data (CID) target-state-compliant computer-executable applications is disclosed. In some implementations, a CID questionnaire that includes one or more requests for information relating to CID exposure associated with an application may be provided to a first user. One or more inputs to the one or more information requests may be received from the first user. Current state information associated with the application may be determined based on the one or more inputs and one or more CID-related criteria. The current state information may include risk information indicating current CID exposure associated with the application. Target state information associated with the application may be received. Remediation information associated with the application may be provided to one or more users. The remediation information may be determined based on the current statement information and the target statement information.
