

ABSTRACT

SHEET-SHAPED OBJECT ATTACHING DEVICE

An object of the present invention is to provide a device for efficiently attaching a sheet-shaped object to a target site. The present invention relates to a sheet-shaped object attaching device including a support body for supporting a sheet-shaped object, and a protective member having a low coefficient of friction for protecting one surface of the support, in which the support body supporting the sheet-shaped object is rolled while being protected by the protective member and can be inserted into a tubular body.
