

## ABSTRACT

A data processing method, a data processing apparatus, a webpage processing device, a server, a system, and a storage medium. The method comprises: a Python back end obtains a data processing instruction (S301); the Python back end obtains a data processing result according to the data processing instruction (S302); the Python back end generates a processing file according to the data processing result, so that a Unity front end reads the processing file using a preset interface, and displays a page according to the processing file (S303).
