

ABSTRACT

[Problem] To provide a system for notifying a user of whether contents displayed on terminals between a plurality of users are identical and a system with which, when an input is made on one terminal in one answer section of a questionnaire, information regarding a question item corresponding to the above-described answer section is displayed on another terminal.[Solution] A system 1 is connected to a first and a second terminals 3, 5. When an object displayed on a screen of the first terminal 3 is a first object and an object corresponding to the first object displayed on a screen of the second terminal 5 is a second object, the system 1 causes one or both of the screens of the first and the second terminals 3,5 to display: one or both of an identicalness sign 11 as a display regarding that the first object and the second object are identical, and a discrepancy sign 13 as a display regarding that the first object and the second object are different.
