(54) **Title:** DEVICE FOR FACILITATING FLUID SUPPLY THROUGH AN ANAL CANAL AND METHOD EMPLOYED THEREOF

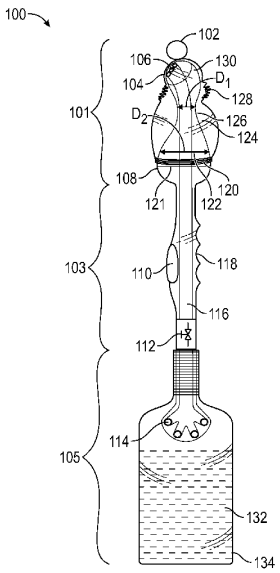

FIG. 1

(57) **Abstract:** Embodiments of this disclosure present a device designed to facilitate fluid supply through an anal canal. The device consists of three integral components: a fluid facilitating probe, a fluid supply channel, and a fluid source. The fluid facilitating probe features an upper curved portion for guiding fluid flow, a middle waist portion to prevent leakage, and a lower curved portion with a larger diameter to ensure a secure fit at the anal verge, effectively preventing fluid leakage during use. Multiple ridges on the lower curved portion act as visual and sensory guides, aiding both healthcare professionals and individuals, particularly during self-administration. A pull tab cap, enclosing the fluid facilitating probe, contains corrugated baffles and small openings for efficient fluid distribution and prevents leakage. The fluid supply channel includes thumb and finger grip portions for secure handling, while the fluid source utilizes gravity to deliver fluid through multiple supply holes.
