

Toothbrush**Abstract**

The manual toothbrush (1) has an elongated handle (2) defining a geometric longitudinal axis (10) of the handle. The handle (2) has a recess (6) and an end face (5) transverse to the longitudinal axis (10) of the handle. A marking body (8) is materially bonded in the end face (5) of the handle. The marking body (8) is preferably designed as an insert body that fits snugly in the recess (6) when viewed in cross-section perpendicular to the longitudinal axis (10) of the handle. The recess can have a length (L) that is at least a multiple of a length of the marking body (8).
