(54) Title: HEAT SINK MANUFACTURING DEVICE AND MANUFACTURING METHOD

(57) Abstract: It is an object of the
present invention to provide a device
and method for manufacturing a
heat sink that has a base and heat
radiating fins of various shapes
and has prescribed strength, high
heat-radiating efficiency, and whose
base and heat-radiating fins are
formed integrally. A heat sink
manufacturing device according to
the present invention includes a die
casting machine which has the cavity
for a base and heat-radiating fins,
and which includes a fixed mold, a
movable mold that can move in the
vertical or up-down direction, and
a slide mold that can move in the
horizontal direction.
