- (54) **Title:** METHOD AND CACHE SERVER FOR LIVE VIDEO CONTENT DELIVERY

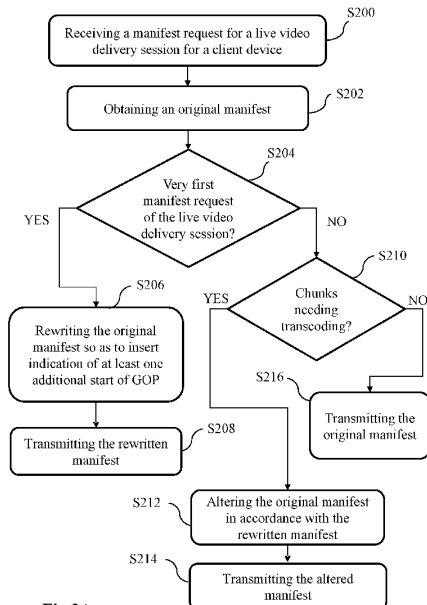

Fig.3A

- (57) **Abstract:** A method for delivering a live video content using adaptive streaming from a cache server to a client device during a live video content delivery session is disclosed. When a very first manifest request is received in said live content video delivery session, the cache server rewrites (S206) an original manifest by modifying a descriptor of at least one chunk so as to insert at least one additional start of independent group of pictures and transmits (S208) the rewritten manifest to the client device in response to the received manifest request. This enables the client device to have opportunities to join live video streaming closer to live edge.
