FIG. 4

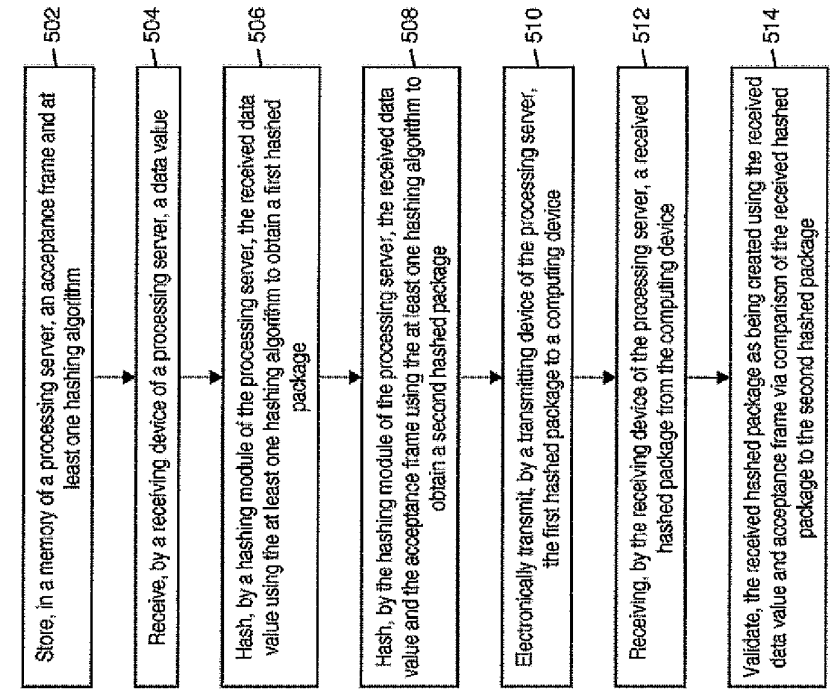

500
Store, in a memory of a processing server, an acceptance frame and at least one hashing algorithm
502
Receive, by a receiving device of a processing server, a data value
504
Hash, by a hashing module of the processing server, the received data value using the at least one hashing algorithm to obtain a first hashed package
506
Hash, by the hashing module of the processing server, the received data value and the acceptance frame using the at least one hashing algorithm to obtain a second hashed package
508
Electronically transmit, by a transmitting device of the processing server, the first hashed package to a computing device
510
Receiving, by the receiving device of the processing server, a received hashed package from the computing device
512
Validate, the received hashed package as being created using the received data value and acceptance frame via comparison of the received hashed package to the second hashed package
514
