

ABSTRACT

To provide a menu display method capable of preventing a check error while rationalizing the work of checking information of ingredients to avoid of dishes in plural menus with information of ingredients to avoid of users by performing computer processing, and further capable of clarifying which dish is to be changed from a changed menu table. As a solution, menu display procedures of the menu display method include Step S1 of extracting data, Step 2 of checking information of ingredients to avoid, Step S3 of determining whether first information of ingredients to avoid overlaps with second information of ingredients to avoid or not, Step S4 of searching a first dish name when the information of ingredients to avoid overlaps, Step S5 of determining whether the first dish name exists in basic menu table information or not, Step S6 of extracting a second dish name, Step S7 of giving a prohibition display to the first dish name, Step S8 of arranging the second dish name and Step S9 of outputting individual menu table information.
