

ABSTRACT

This application relates to a virtual object control method and apparatus in a virtual scene, a device, and a storage medium, and relates to the field of virtual scene technologies. The method includes: determining a search range greater than a maximum shooting range of a target skill in a virtual scene corresponding to the target skill in response to receiving an operation on a target skill control; and searching the search range for a target virtual object in the virtual scene; and controlling, when the target virtual object is found within the search range and based on a position of the target virtual object in the virtual scene, a first virtual object to cast the target skill in the virtual scene.
