- (88) Date of publication of the international search report:
28 November 2013

(54) Title: LOW NOISE TURBINE FOR GEARED TURBOFAN ENGINE

**FIG.1**

(57) Abstract: A gas turbine engine is utilized in combination with a gear reduction to reduce the speed of a fan relative to a low pressure turbine speed. The gas turbine engine is designed such that a blade count in the low pressure turbine multiplied by the speed of the low pressure turbine will result in operational noise that is above a sensitive range for human hearing. A method and turbine module are also disclosed.
