(54) **Title:** PROCESSES FOR BLENDING TWO OR MORE STREAMS OF LIQUIFIED HYDROCARBONS

(57) **Abstract:** A method for blending two liquified hydrocarbon streams, particularly from two vessels. The method comprises pumping a stream of a first liquified hydrocarbon to a first blending point; pumping a stream of a second liquified hydrocarbon to the first blending point; combining the first and second liquified hydrocarbon streams at the blending point in a volumetric ratio of the first to the second liquified hydrocarbon stream in a range from 1 : 500, preferably 1 : 100, and up to 500: 1 to provide a combined stream. The combined stream is provided from the first blending point back to an inlet of the source of the first liquified hydrocarbon via the combined conduits, under an operating pressure that is higher than the saturation pressure of the combined stream, at least while the combined stream travels from the first blending point to a final valve immediately upstream of the inlet of the source of the first liquified hydrocarbon.
