

METHOD AND SYSTEM FOR RECOMMENDING FRIENDS IN SOCIAL NETWORKING SERVICE COMMUNITY

5 **Abstract**

10 The present invention provides a method and system for recommending friends in
social networking service (SNS) community, and the method includes: obtaining user's
behavior information; according to the behavior information and combining with
community information, generating a friend recommendation list; and recommending the
friend recommendation list to the user. Applying the method and system provided by the
present invention, for recommending friend in SNS community, can greatly enhance the
probability of finding friends for the users; meanwhile, the method and system can be
15 provided to the user in unsolicited manner when the users login in the community, and
make the users conveniently select the persons they probably know or they hope to know,
thereby the dependency of the community is enhanced, and the activity of the friend's
relationship of the community is inspired.
